MEMORANDUM**

NAME OF SCHOOL \_\_\_\_\_

**MARKS: 100**

**This MEMORANDUM consists of 7 pages including the cover page**

**SECTION A**

**QUESTION 1**

- 1.1. B✓✓ (2)
- 1.2. B✓✓ (2)
- 1.3. C✓✓ (2)
- 1.4. B✓✓ (2)
- 1.5. D✓✓ (2)
- 1.6. A✓✓ (2)
- 1.7. B✓✓ (2)
- 1.8. D✓✓ (2)
- 1.9. A✓✓ (2)
- 1.10. B✓✓ (2)

**[20]**

**SECTION B**

**QUESTION 2**

- 2.1. Newton's Second law of Motion states that when a resultant /net force acts on an object will accelerate in the direction of the force. ✓ This acceleration is directly proportional to the force and inversely proportion to the mass of the object. ✓ (2)

- 2.2. (4)

| Accepted labels |  |
|-----------------|--|
| W               | $F_g$ / $F_w$ / weight/mg /gravitational force |
| $f_k$           | $F_{\text{friction}}$ / $F_f$ / friction       |
| N               | $F_N$ / $F_{\text{normal}}$ / normal force     |
| $F_T$           | $F_t$ / T/ tension                             |

- 2.3. Calculate the:

- 2.3.1. Up the incline as positive (5)

$$\begin{aligned}
 F_{net} &= ma \\
 F_T + f_k + W_{//} &= ma \\
 F_T + \mu_k N + mg \sin 30^\circ &= ma \\
 F_T + \mu_k mg \cos 30^\circ + mg \sin 30^\circ &= ma \checkmark \\
 F_T - (0.3)(6)(9.8) \checkmark - (6)(9.8) \sin 30^\circ \checkmark &= (6)(4) \checkmark \\
 F_T &= 63.58 \text{ N} \checkmark
 \end{aligned}$$

2.3.2. REMAINS THE SAME.

(1)  
[12]

### QUESTION 3

3.1.

(2)

| Acceptable labelling |   |
|----------------------|---|
| $F_g$                | W / $F_w$ / weight/mg / gravitational force |
| $F_f$                | $F_{\text{friction}}$ / $f_k$ / friction    |
| $F_N$                | N / $F_{\text{normal}}$ / normal force      |

3.2.  $F_{net} = ma \checkmark$  (5)  
 $7400 = 1400 \times a \checkmark$   
 $\therefore a = 5.29 \text{ m} \cdot \text{s}^{-1} \checkmark$

3.3.  $F_f = \mu_k F_N \checkmark$  (3)  
 $= \mu_k mg \cos \theta$   
 $= 0.23 \times 1400 \times 9.8 \cos 25^\circ \checkmark$   
 $= 2.86 \times 10^3 \text{ N} \checkmark$

3.4  $F_{net} = F_a + F_f \cos 180^\circ + mg \sin \theta \cos 180^\circ \checkmark$  (4)  
 $7400 \checkmark = F_a - 2.86 \times 10^3 - 1400 \times 9.8 \sin 25^\circ \checkmark$   
 $= 16058.32 \text{ N} \checkmark \text{ or } 1.61 \times 10^4 \text{ N}$

[14]

### QUESTION 4

4.1. Any two objects in the universe attract each other ✓ with a force directly proportional to the product of their masses ✓ and inversely proportional to the square of the distance between their centres ✓ (2)

4.2.  $F = \frac{Gm_1 m_2}{R^2}$  ✓ where  $R$  is the distance between the centres of the two (5)  
 $5000 \text{ N} = \frac{(6.67 \times 10^{-11})(5.98 \times 10^{24})(615)}{R^2}$  ✓  
 $R = 7.0 \times 10^6 \text{ m}$   
*height* =  $R - r$  where  $r$  is the radius of the earth  
 $= 7.0 \times 10^6 - 6.38 \times 10^6$  ✓  
 $= 6.2432 \times 10^5 \text{ m}$   
 $= 6.24 \text{ km}$  ✓

4.3. (3)  
 $F = \frac{Gm_1 m_2}{r^2}$   
 $= \frac{Gm_1 2m_2}{(2r)^2}$  ✓  
 $= \frac{1}{2} \frac{Gm_1 m_2}{r^2}$   
 $= \frac{1}{2} (5000)$  ✓  
 $= 2500 \text{ N}$  ✓

[10]

**QUESTION 5**

5.1  $\mu_s = \frac{F_{s,max}}{F_N}$  ✓ (2)

5.2.1 Use the checklist to mark this question.

|  |   |   |     |
|--|---|---|-----|
| <b>The investigative question has the:</b> | 1 | 0 | (2) |
| Dependant variable                         |   |   |     |
| Independent variable                       |   |   |     |

Example of an investigative question:

Is the coefficient of static friction for the shoe on the tile bigger than, smaller than or equal to 0,5? **OR**

What is the coefficient of static friction for the shoe on the tile? **OR ANY AS LONG AS BOTH VARIABLES ARE SHOWN**

5.2.2 **Apparatus for method 1:** (2)  
 Protractor ✓  
 Ruler ✓

**Apparatus for method 2**

Spring balance  
 Scale

5.2.3 **Method 1** (3)  
 Place the shoe on the tile. Lift the one end of the tile gradually until the

shoe JUST STARTS TO SLIDE down the tile. ✓

**IF PROTRACOR USED**

Measure the angle between the tile and the horizontal surface. ✓

**IF RULER USED:**

Measure any two of the following: perpendicular height of the tile, length of the tile or the length from the foot of the tile to the perpendicular height and then use trigonometry to determine the angle ✓

The following free body diagram illustrates the different forces acting on the shoe.

**Use the checklist to mark this question.**

| <b>The free body diagram:</b>  | <b>1</b> | <b>0</b> | <b>(2)</b> |
|--|----------|----------|------------|
| Normal force and force of friction on the shoe correctly indicated.  |          |          |            |
| Relationship between the angle that the inclined plane forms with the horizontal and the static force of friction correctly. |          |          |            |

**{5}**

**OR**

**Method 2**

Place a heavy object in the shoe and determine the mass of the shoe and the object. ✓

Pull the shoe with the heavy object inside with a spring balance. ✓

Take the reading on the spring balance ( $F$ ) when the shoe just starts to move ✓

|  |          |          |
|--|----------|----------|
| <b>The free body diagram:</b>                      | <b>1</b> | <b>0</b> |
| Normal force on the shoe correctly indicated.      |          |          |
| Force of friction on the shoe correctly indicated. |          |          |

5.2.4 **Method 1** (2)  
Size of the angle between tile and floor when shoe just starts to slide.  $\checkmark\checkmark$

**Method 2**

Mass of shoe and heavy object.  $\checkmark$  Reading on spring balance when shoe just starts to move.  $\checkmark$

5.2.5 (2)

**Method 1**

The normal force,  $F_N = F_g \cos \theta$  and

$$F_s = \mu_s \cdot F_g \cos \theta$$

$$\mu_s = \frac{F_s}{F_g \cos \theta} = \tan \theta$$

If  $\mu_s$  is bigger or equal to 0,5, the grocer is not guilty.

If  $\mu_s$  is smaller than 0,5, the grocer is guilty.

|   |          |          |
|---|----------|----------|
| <b>The conclusion:</b>  | <b>1</b> | <b>0</b> |
| Correct mathematical expression to determine coefficient of friction. |          |          |
| Indicates how it will be determined whether grocer is guilty or not   |          |          |

[15]

**QUESTION 6**

6.1. Bond energy is the amount of energy required to break one mole of a particular covalent bond in the gaseous state.  $\checkmark\checkmark$  (2)

6.2. H-F is the strongest.  $\checkmark$  (2)  
largest amount of energy is required to break one mole particles with the bond  $\checkmark$

6..3.

6.3.1  $N_{2\checkmark} + 3H_{2\checkmark} \rightarrow NH_{3\checkmark}$  balancing  $\checkmark$  (3)

6.3.2.  $N_2$ : triple non-polar covalent  $\checkmark$  (2)  
 $NH_3$ : single polar covalent  $\checkmark$

6.3.3. Draw a Lewis diagram of the  $NH_3$  molecule (2)

6.3.4 Trigonal pyramidal  $\checkmark$  (2)

- 6.3.5. Polar<sup>√</sup>- has polar bonds ( $\Delta EN=0.9$ ) and asymmetrical shape that results in a permanent dipole<sup>√</sup> (2)
- 6.4 What type of forces-interatomic or intermolecular- are involved in the following? (2)
- 6.4.1. Intermolecular<sup>√√</sup> (2)
- 6.4.2. Intermolecular<sup>√√</sup> (2)
- 6.4.3. Intermolecular<sup>√√</sup> (2)
- [21]

#### QUESTION 7

- 7.1 Higher heat capacity<sup>√√</sup> . (2)
- 7.2. Water has strong hydrogen bonding between it particles<sup>√</sup>. This means, it takes more heat to raise the temperature of water<sup>√</sup> one degree than any other liquid (except ammonia).  
 This is because a lot of heat added to water is used to break strong hydrogen bonds<sup>√</sup> and not to increase the motion of the water molecules<sup>√</sup>, causing temperature change; this keeps the temperature near the ocean relatively constant.
- 7.3. It would look like mars. There would be large changes in temperature<sup>√</sup> and life would not exist<sup>√</sup>. (2)
